

CoziLogs™

High on Heat · Low on Emissions

**Thank you for
buying CoziLogs kiln
dried firewood!**

Order online:

www.cozilogs.co.uk

The CoziLogs Assurance:

- ✓ We are a Woodsure 'Ready to Burn' certified supplier
- ✓ Our dry fuel is made from 100% British-grown, virgin timber which is BSL/FSC certified and sustainably sourced from responsibly managed forests
- ✓ With 12 distribution centres across the UK we can fulfil any order quickly and efficiently

Your CoziLogs fuel is perfect for:

- ✓ Wood burning stoves
- ✓ Firepits
- ✓ Chimineas
- ✓ Pizza ovens
- ✓ Open fires
- ✓ Campfires
- ✓ Wood boilers

CoziLogs™

High on Heat · Low on Emissions

Part of the Chip Chip group, we offer a sustainable solution to homeowners and businesses who are looking for fuel that produces low emissions without compromising on heat value. Here's what you'll get to enjoy from your CoziLogs firewood...

What is 'Ready to Burn'?

'Ready to Burn' certification from the UK's only firewood quality assurance scheme, Woodsure, guarantees firewood has a moisture content below 20%.

What are the benefits of 'Ready to Burn' firewood?

Firewood certified 'Ready to Burn':

- ✓ Burns more efficiently
- ✓ Produces a higher heat output
- ✓ Reduces emissions
- ✓ Lights more easily
- ✓ Is responsibly sourced from well-managed, BSL/FSC approved forests

**Ready to Burn kiln dried
mixed hardwood certified
by Woodsure**

**Your CoziLogs
firewood is
'Ready to Burn'!**

Burn Efficiency

A stove burning wood with 60% moisture content will smoke more and burn far less resourcefully than one with an effective 'air flow control system' burning CoziLogs' kiln dried firewood, which has a moisture content of 20%.

Low moisture content - less than 20% providing a clean burn and high heat output

Energy Efficiency

CoziLogs' kiln dried firewood provides much better value in cost per kilowatt energy in comparison to damp wood.

Less moisture = more heat output

Wet or freshly cut wood (60–90% moisture content) **X**
1.0 kWh per kg

Semi-dried logs (40–50% moisture content) **X**
3.0 kWh per kg

CoziLogs Kiln dried logs (below 20%) **✓**
4.5 kWh per kg

**100% virgin, traceable,
sustainable wood**

Why is 'Ready to Burn' better than wet wood?

Unlike 'Ready to Burn' logs, burning wet wood:

- ✓ Releases nasty emissions into the atmosphere
- ✓ Takes more wood to produce the same heat output
- ✓ Damages wood burning appliances by leaving sooty residue
- ✓ Creates additional maintenance costs
- ✓ As a result of the above, it ends up far more costly

With your CoziLogs firewood you can enjoy complete peace of mind knowing it is certified Woodsure 'Ready to Burn', helping your appliances maintain optimum efficiency, minimising emissions and providing better heat output - all without the frustration of trying to burn wet wood.
